

Test Report

Chalmers On The Go – the Complete Chalmers Experience

This document describes the different user stories, their associated acceptance tests and the unit tests made when developing the ChalmersOnTheGo Androis application.

For ChalmersOnTheGo 1.0, Jelly Bean 4.1.

Fredrik Einarsson - Niklas Johansson - René Niendorf Anders Nordin - Sofie Peters

		ACCEPTANCE TESTS	
	2.2	Unit tests	. 13

1 User stories

Below you will find a complete list of user stories, used while developing the ChalmersOnTheGo application. Their presented order is not an internal prioritising between the stories. Please note that some user stories are generally formulated, for an example "I want to see all rooms". These are tested only with a limited amount of data, not the data for *all* the rooms there are in the Chalmers, due to time limitations regarding collection of data. As long as more data is added in the correct way described in the <u>Developer Manual</u>, those user stories are probable to be correct. Please also note that user stories marked with an asterisk (*) have not been implemented. For more information on these, see section 3.3. Design decisions in document <u>Software Development Document.docx</u>.

General

- As a user, I should be able to exit the application at any time from inside the application ¹
- As a user, I want to be able to reverse my actions with a back-button²

Map

- As a user, I should only be able to see and navigate inside the Chalmers area³
- As a user opening the application, I want to see a fixed view of the Chalmers area, which always has the same starting coordinates⁴
- As a user opening the application, I want to see my current position on the map²³
- As a user, I want to be able to click on a marked location, generating a popup window informing me about the name and floor of the location⁵
- As a user, I want to be able to erase all marked locations on the map²⁴
- As a user, I want to be able to see possible shortcuts between or through buildings. *

Navigation

- As a user having gotten a location marked on the map, I want to be able to get the shortest path from my current location to the wanted location, by clicking the locations information window⁶
- As a user, I want to be able to get the map centred at my current location⁷
- As a user navigating to a certain location, I want to know how long time it will take me to get there²⁹
- As a user navigating to a certain location, I want to know the distance between my current location and the wanted location 30
- As a user, I want to be able to search for the shortest path between two separate locations, without needing to be currently positioned on any of them³¹
- As a user, I want to be able to touch mark a location on the map, without needing to search for it³²

Searching

• As a user typing in a search for some item, I want a dropdown menu to appear with word-completed suggestions⁸

- As a user searching and getting suggestions, I want to be able to click any suggestion and get the location I clicked marked on the map⁹
- As a user, I want to be able to search for building and get the closest entry to the building marked on the map¹⁰
- As a user, I want to be able to search for a building and get all the rooms in the building marked on the map¹¹
- As a user, I should be able to search for different room types, and get all the rooms of the specific type as suggestions¹²

Layer function

- As a user, I want to be able to have a checkbox-regulated layer function where I can choose between location types¹³
- As a user checking any layer, I want to be able to see all the locations concerned by the specific layer¹⁴
- As a user, I want to have layers with computer rooms, lecture halls, group rooms, floors and pubs¹⁵

Different application modes

- As a user, I should be able to switch between night and day mode at any point or time in the application *
- As a user currently in night mode, I want to see the buildings coloured according to their associated section's colour *
- As a user currently in day mode, I want to see the buildings coloured neutrally *

Non-navigational features

- As a user, I want features not only concerned with the map and navigation
- As a user, I want to se how many steps I have taken²⁵
- As a user, I want to be able to see when I have burnt enough calories walking, to drink either a glass of wine, beer, shot, or cider²⁶
- As a user, I want to be able to notify the application that I have taken a drink so that the calorie burning start for a new drink²⁷
- As a user, I want to be able to synchronise my Time Edit schedule with the map to see where my lectures are *

Design, appearance and user support

- As a user, I want a nice looking application icon 16
- As a user, I want to be able to reach all the application's functions from a menu system similar to Google maps¹⁷
- As a user searching for items, I want to see an icon symbolising the type of room, building or pub for each suggestion I get¹⁸
- As a user checking the "pub layer", I want to be able to see the buildings where the pubs are painted with the colour of the respective pub's sections¹⁹
- As a user opening the application, I want to be prompted to activate the GPS if it is not already enabled²⁰
- As a user, I want the GUI to have an appealing appearance²¹
- As a user, I want the application to perform wanted actions reasonably fast²²
- As a user, I should be able to switch orientation mode between vertical and horizontal without loosing my choices²⁸

2 Testing

In the texts below you will find a complete list acceptance tests and unit tests, as well as their associated user stories, ran while developing the application ChalmersOnTheGo.

2.1 Acceptance tests

All user stories have been manually acceptance tested. The user stories are tested mainly to pass, but also to fail, and the tests have reasonable branch coverage. The validity in the tests is assured by their tight connection to user stories. The tests are made to verify the implementation.

What is tested	Exit-functionality
How it is tested	From each view, the exit-function in the menu is tried out
Expected result	Exit should happen whenever the exit-button is pressed
Actual result	Expected result
Associated user story	As a user, I should be able to exit the application at any time from inside the application ¹
What is tested	Back/reverse-functionality
How it is tested	From each view, the back-function is tried.
Expected result	Previously taken step should reverse whenever the back-button is pressed.
Actual result	Expected result
Associated user story	As a user, I want to be able to reverse my actions with a back-button ²
What is tested	Zoom-out limit
How it is tested	Repeatedly zoom out in map.
Expected result	The map should only show the Chalmers area, not more.
Actual result	Expected result
Associated user story	As a user, I should only be able to see and navigate inside the Chalmers area ³
	533333433 18341
What is tested	Map boundaries
What is tested How it is tested	
	Map boundaries
How it is tested	Map boundaries Repeatedly scrolling outside of the map.
How it is tested Expected result	Map boundaries Repeatedly scrolling outside of the map. The map should get stuck on the boundaries.
How it is tested Expected result Actual result Associated user story	Map boundaries Repeatedly scrolling outside of the map. The map should get stuck on the boundaries. Expected result As a user, I should only be able to see and navigate inside the Chalmers area ³
How it is tested Expected result Actual result	Map boundaries Repeatedly scrolling outside of the map. The map should get stuck on the boundaries. Expected result As a user, I should only be able to see and navigate inside the Chalmers area ³ Navigation fail outside Chalmers The user stands outside the map boundaries and tries to navigate with

How it is tested Expected result Actual result Associated user story What is tested How it is tested Expected result Actual result Associated user story What is tested	Map boundaries Repeatedly scrolling outside of the map. The map should get stuck on the boundaries. Expected result As a user, I should only be able to see and navigate inside the Chalmers area ³ Navigation fail outside Chalmers The user stands outside the map boundaries and tries to navigate with the application. The map should show fixed coordinates of the map; centre of campus Expected result As a user, I should only be able to see and navigate inside the Chalmers area ³ Limited data on Chalmers area

Associated user story	As a user, I should only be able to see and navigate inside the
11000ciated abel otoly	Chalmers area ³
What is tested	Fixed starting coordinates and current position
How it is tested	Repeatedly opening the application and visual control.
Expected result	The map view should show the intended coordinates and position.
Actual result	Expected result
Associated user story	As a user opening the application, I want to see a fixed view of the
11000ciated abel otoly	Chalmers area, which always has the same starting coordinates ⁴
What is tested	Information (and navigation) window
How it is tested	Arbitrary locations are searched and marked on the map. The marker
	is clicked.
Expected result	When clicking the marker, it should trigger the popup window
	containing room name, floor and a "Navigate to here"-text.
Actual result	Expected result
	As a user, I want to be able to click on a marked location, generating a
Associated user story	popup window informing me about the name and floor of the
	location ⁵
What is tested	(Information and) navigation window
How it is tested	Arbitrary locations are searched and marked on the map. The marker
	is clicked. The information popup window is clicked.
Expected result	When clicking the popup window, the shortest path from the user's
	current location to the marked location should be drawn on the map.
Actual result	Expected result
A	As a user having gotten a location marked on the map, I want to be
Associated user story	able to get the shortest path from my current location to the wanted location, by clicking the locations information window ⁶
	location, by electing the locations information whitiow
What is tested	Target function
what is tested	The user moves to different places inside the map boundaries and
How it is tested	presses the target button
Expected result	The map should centre on the user's position
Actual result	Expected result
	As a user, I want to be able to get the map centered at my current
Associated user story	location ⁷
	TOOLIGOT!
What is tested	Target function when opening application
How it is tested	The user stands inside the map boundaries and opens the application
Expected result	The map should centre on the user's position
Actual result	Expected result
	As a user opening the application, I want to see my current position on
Associated user story	the map ²³
What is tested	Search field
How it is tested	The search icon is clicked
Expected result	A writeable search field will show up with a marker in it
Actual result	Expected result
Actual lesult	Expected result

Associated user story	As a user typing in a search for some item, I want a dropdown menu
J	to appear with word-completed suggestions ⁸
XX774	0
What is tested	Suggestions in search field
How it is tested	Arbitrary letters are written in the field
Expected result	Word-completed suggestions should show in a dropdown menu
Actual result	Expected result
Associated user story	As a user typing in a search for some item, I want a dropdown menu
11000 CIMICA GOOL STOLY	to appear with word-completed suggestions ⁸
What is tested	Coverage in search field suggestions
How it is tested	Suggestions are generated with arbitrary letters and the suggestions are
	checked manually against the database content
Expected result	The suggestions should represent all the correlating data in the
	database
Actual result	Expected result
Associated user story	As a user typing in a search for some item, I want a dropdown menu
rissociated aser story	to appear with word-completed suggestions ⁸
What is tested	Mark searched location
How it is tested	Arbitrary locations are sought and clicked on in suggestions menu
Expected result	Locations should be marked on the map
Actual result	Expected result
	As a user searching and getting suggestions, I want to be able to click
Associated user story	any suggestion and get the location I clicked marked on the map ⁹
Associated user story	As a user, I want to be able to search for a building and get all the
	rooms in the building marked on the map ¹¹
What is tested	Closest entry function
How it is tested	A search suggestion for a building will be clicked
Expected result	The closest entry should be marked on the map
Actual result	Expected result
Associated user story	As a user, I want to be able to search for building and get the closest
rissociated aser story	entry to the building marked on the map ¹⁰
What is tested	Generic rooms search
How it is tested	Each room type (group room, lecture hall, gym etc.) is searched for
Expected result	They should show up as suggestions
Actual result	Expected result
Associated user story	As a user, I should be able to search for different room types, and get
Associated dset story	all the rooms of the specific type as suggestions ¹²
What is tested	Generic rooms search and navigation
How it is tested	Each room type (group room, lecture hall and computer room) is
	searched for, suggested and clicked
Expected result	All rooms of the specific type are marked on the map
Actual result	Expected result
Associated man stare	As a user, I should be able to search for different room types, and get
Associated user story	all the rooms of the specific type as suggestions ¹²

What is tested	Layer menu
How it is tested	The layer-button is clicked
Expected result	The layer menu should appear
Actual result	Expected result
	As a user, I want to be able to have a checkbox-regulated layer
Associated user story	function where I can choose between location types ¹³
	71
What is tested	Layer menu checkbox alternatives
How it is tested	The layer menu is opened and visually controlled.
Towns at all as a salt	Alternatives should be computer rooms, lecture halls, group rooms
Expected result	and pubs.
Actual result	Expected result
Associated user story	As a user, I want to have layers with computer rooms, lecture halls,
Associated user story	group rooms, floors and pubs ¹⁵
What is tested	Layer menu checkboxes
How it is tested	Arbitrary check-boxes are marked and the menu is closed
Expected result	The chosen location layers should show on the map
Actual result	Expected result
Associated user story	As a user checking any layer, I want to be able to see all the rooms
<i>,</i>	concerned by the specific layer ¹⁴
XX774	T 1 11
What is tested	Layer menu checkboxes
How it is tested	Arbitrary check-boxes are marked and the menu is closed. The menu is
	opened and the check-boxes are unmarked. Close.
Expected result	opened and the check-boxes are unmarked. Close. The unchosen location layers should disappear from the map.
	opened and the check-boxes are unmarked. Close. The unchosen location layers should disappear from the map. Expected result
Expected result	opened and the check-boxes are unmarked. Close. The unchosen location layers should disappear from the map. Expected result As a user checking any layer, I want to be able to see all the rooms

Actual result	Expected result
Associated user story	As a user, I want a nice looking application icon ¹⁶
What is tested	Menu similarity to Google maps
How it is tested	The application's menu system is compared to that of Google maps'
Expected result	The system should be quite similar
Actual result	Expected result
Associated user story	As a user, I want to be able to reach all the application's functions
J	from a menu system similar to Google maps ¹⁷
XX 71 . • 1	T . 1
What is tested	Icons in search suggestions
How it is tested	All different search item types are tried (pubs, buildings, computer
T	room, lecture hall, group room)
Expected result Actual result	The suggestions should show correlating icons to the items
Actual result	Not all types had their own icons
Fix	No. Too big re-implementation of databse. Left to show potential in
New result	application.
New result	As a vacuu accuration for items. I vacuut to account accuration are alleing the
Associated user story	As a user searching for items, I want to see an icon symbolising the type of room, building or pub for each suggestion I get ¹⁸
	type of footh, building of pub for each suggestion i get
What is tested	Building colours for pubs
How it is tested	The pub layer is marked
110W It is tested	The buildings with pubs should be painted in their section colour
Expected result	respectively
Actual result	Expected result
11010011	As a user checking the "pub layer", I want to be able to see the
Associated user story	buildings where the pubs are painted with the colour of the respective
	pub's sections ¹⁹
N T .	Removed feature. Not considered as adding much value, instead
Note	cluttering map.
What is tested	GPS prompt
How it is tested	The GPS function is deactivated. Then the application is opened.
Expected result	A window should prompt the user to enable the GPS function.
Actual result	Expected result
A	As a user opening the application, I want to be prompted to activate
Associated user story	the GPS if it is not already enabled ²⁰
What is tested	Attractiveness in GUI
How it is tested	Visual control and discussion among team members.
Expected result	Consensus in that it is appealing.
Actual result	Expected result
Associated user story	As a user, I want the GUI to have an appealing appearance ²¹
What is tested	Application performance
How it is tested	Arbitrary functions are clicked and the time they take to react is
110W It IS ICSICU	measured with timer

Expected result	Each carried-out action should take at the most 1 second
Actual result	
Actual result	Expected result
Associated user story	As a user, I want the application to perform wanted actions reasonably
·	fast ²²
What is tested	Empty map function
How it is tested	Arbitrary locations and layers are added to the map, and then the
	empty map-button clicked
Expected result	The map should be become clean
Actual result	Expected result
Associated user story	As a user, I want to be able to erase all marked locations on the map ²⁴
What is tested	Activation and deactivation of step counter
How it is tested	The StepCounter will be activated, arbitrary functions carried out, then
110w it is tested	the StepCounter will be deactivated
Expected result	The StepCounter should activate and deactivate when ordered to
Actual result	Expected result
Associated user story	As a user, I want to se how many steps I have taken ²⁵
What is tested	Activate/Deactivate message
TT 1.1 1	The StepCounter will be activated, arbitrary functions carried out, then
How it is tested	the StepCounter deactivation windows will be visually controlled
Expected result	The StepCounter option should show "Deactivate StepCounter"
	The StepCounter option shows "Activate StepCounter" even though it
Actual result	is activated if phone orientation is changed
г.	Activate/Deactivate message saved as variable and fetched when
Fix	orientation changed
New result	Expected result
Associated user story	As a user, I want to se how many steps I have taken ²⁵
J	, , , ,
What is tested	Counting steps
	The StepCounter will be activated and the user will walk and manually
How it is tested	count her steps, comparing them to those in the StepCounter.
	The number of steps manually counted and those counted by the
Expected result	StepCounter should correlate.
Actual result	Expected result
Associated user story	As a user, I want to se how many steps I have taken ²⁵

What is tested	Path between separate locations
How it is tested	Two arbitrary locations are searched for and marked on the map.
Expected result	The path between them should be drawn.
Actual result	Expected result
Associated user story	As a user, I want to be able to search for the path between to separate
Associated user story	location, without currently positioned on any of them ³¹

What is tested	Location marking with touch
How it is tested	A finger is pressed and held against arbitrary places on the map
Expected result	The locations held against should be marked
Actual result	Expected result
Associated user story	As a user, I want to be able to touch mark a location on the map,
Associated user story	without needing to search for it ³²

2.2 Unit tests

All database methods in the DAO (Data Access Object) class have been unit tested, using the public Assert class. The methods are tested both to pass and to fail and the tests have extensive statement coverage. These tests were made to verify the implementation.

• Insertion and getting in table 4 (buildings table), test case

- o insertIntoTable4 and getAllFromTable4 were tested together:
 - A building name (String) was inserted into table 4 via insertIntoTable4 and fetched with getAllFromTable4

• Insertion and getting in table 2 (room types table), test case

- o insertIntoTable2 and getAllFromTable2 were tested together:
 - Three room types (String) were inserted into table 2 via insertIntoTable2 and fetched with getAllFromTable2

• Insertion and getting in table 1 (coordinates and buildings table), test suite

- o insertIntoTable1 and getClosestEntry were tested together:
 - A pair of coordinates (Double) and a building name (String) were inserted into table 1 via insertIntoTable1.
 - The coordinates (Double) were used to create an object (LatLng) containing latitude and longitude.
 - The object (LatLng) and the building name (String) served as input in getClosestEntry.
 - The result of getClosestEntry (LatLng) and the object (LatLng) containing the coordinates were compared and found to be equal.
 - Calculating the closest entry
- o insertIntoTable1 and getClosestEntry were tested together:
 - An object (LatLng) containing zero coordinates, the current coordinates, were created.
 - Five different coordinate pairs (Double) and a building name (String) were inserted into table 1 via insertIntoTable1.
 - The pair of coordinates (Double) closest to the zero coordinates, were in addition used to create an object (LatLng) containing latitude and longitude.
 - The zero coordinates object (LatLng) and the building name (String) served as input in getClosestEntry.
 - The result of getClosestEntry (LatLng) and the closest coordinate pair object (LatLng) were compared and found to be equal.

- Insertion and getting in table 3 (room name, coordinates, room type, building and floor table)
- o insertIntoTable3 and getRoomCoordinates were tested together:
 - A pair of coordinates (Double) were used to create an object (LatLng) containing latitude and longitude.
 - A room type (String) was inserted into table 2 via insertIntoTable2.
 - A building name (String) was inserted into table 4 via insertIntoTable4.
 - The room name (String), the coordinates (Double, the room type (String), the building name (String) and a floor (String) were inserted into table 3 via insertIntoTable3.
 - The room name (String) served as input in getRoomCoordinates.
 - The result of getRoomCoordinates (LatLng) and the object (LatLng) containing the coordinates were compared and found to be equal.
 - Getting all rooms in a specific building
- o insertIntoTable2, insertIntoTable3, insertIntoTable4 and getAllRoomsInBuilding were tested together:
 - A room type (String) was inserted into table 2 via insertIntoTable2.
 - A real building name (String) was inserted into table 4 via insertIntoTable4
 - A false building name (String) was inserted the same way.
 - Room name1 (String), coordinate pair1 (Double), the room type (String), the true building name (String) and floor1 (String) were inserted into table 3 via insertIntoTable3.
 - Room name2 (String), coordinate pair1 (Double), the room type (String), the true building name (String) and floor2 (String) were inserted into table 3 via insertIntoTable3.
 - A false room name (String), coordinate pair1 (Double), the room type (String), the false building name (String) and floor1 (String) were inserted into table 3 via insertIntoTable3.
 - The true building name (String) served as input in getAllRoomsInBuilding.
 - The result of getAllRoomsInBuilding (ArrayList<String>) was tested using methods size and contains, and found to be satisfactory.
 - Getting all rooms with a specific type
- o insertIntoTable2, insertIntoTable3, insertIntoTable4 and getAllRoomsInBuilding were tested together:
 - A room type (String) was inserted into table 2 via insertIntoTable2.
 - A false room type (String) was inserted the same way.
 - A building name (String) was inserted into table 4 via insertIntoTable4
 - Room name1 (String), a coordinate pair1 (Double), the true room type (String), the building name (String) and floor1 (String) were inserted into table 3 via insertIntoTable3.
 - Room name2 (String), coordinate pair1 (Double), the true room type (String), the building name (String) and floor2 (String) were inserted into table 3 via insertIntoTable3.
 - A false room name (String), coordinate pair1 (Double), the false room type (String), the building name (String) and floor1 (String) were inserted into table 3 via insertIntoTable3.
 - The building name (String) served as input in getAllRoomsInBuilding.
 - The result of getAllRoomsInBuilding (ArrayList<String>) was tested using methods size and contains, and found to be satisfactory.
 - Getting suggestions

o insertIntoTable2, insertIntoTable3, insertIntoTable4 and suggestions were tested together:

- A room type (String) was inserted into table 2 via insertIntoTable2.
- A building name (String) was inserted into table 4 via insertIntoTable4
- A room name (String), a coordinate pair (Double), the room type (String), the building name (String) and a floor (String) were inserted into table 3 via insertIntoTable3.
- Different strings of letters matching the strings in table 3 served as input in suggestions.
- The result of suggestions (ArrayList<String>) was tested using methods for size and null, and found to be satisfactory.
- Getting room names
- o insertIntoTable3 and getName were tested together:
 - A room name (String), a coordinate pair (Double), a room type (String), a building name (String) and a floor (String) were inserted into table 3 via insertIntoTable3.
 - The room name (String) served as input in getType.
 - The result of getName (String) and the room name were compared and found to be equal.
 - Getting room types
- o insertIntoTable3 and getType were tested together:
 - A room name (String), a coordinate pair (Double), a room type (String), a building name (String) and a floor (String) were inserted into table 3 via insertIntoTable3.
 - The room name (String) served as input in getType.
 - The result of getType (String) and the room type were compared and found to be equal.
 - Getting floor
- o insertIntoTable3 and getFloor were tested together:
 - A room name (String), a coordinate pair (Double), a room type (String), a building name (String) and a floor (String) were inserted into table 3 via insertIntoTable3.
 - The room name (String) served as input in getFloor.
 - The result of getFloor (String) and the floor were compared and found to be equal.
